OGLESBY & BUTLER CELEBRATES THE
MILLENNIUM IN STYLE.

In recent years our new models were of the larger type, e.g. SuperPro, etc. But we have not forgotten Users who prefer the smaller pocket size.

Instead we took the lessons we've learned in recent years, utilising all the CAD and CNC technology we've accumulated, and came up with an ultra-compact unit which we've called the Pro Piezo. "Pro" because it's our version of the best selling Professional model for the new Millennium, and "Piezo" for obvious ignition reasons.

All the expected functions are there in addition to the core soldering application; flame, hot air, and hot knife. In the visually appealing kit version it's all included. In the case of the flame we've even generated an all-weather turbo-flame which requires a certain care, as it is not highly visible in certain lighting conditions.

So this is a tool which should not be underestimated; it's a pocket sized power-house. And, we think, stylish, too.

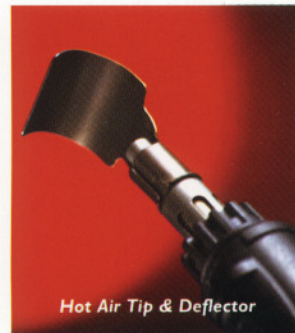

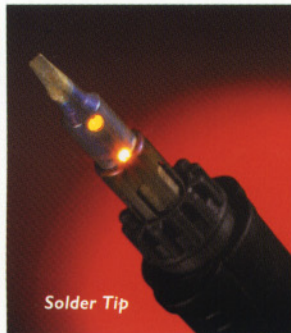

We'll let the visuals convince you, the User, until you actually have one to use.
